

## Module descriptions

### Master program

## Electrical Engineering and Information Technology

April 1, 2015

## Table of contents

### Technical compulsory modules

Enrolment: All modules

Electromagnetic Field Theory .....	3
Electronic Circuits .....	4
Digital Communication Systems .....	5
Digital Information Processing .....	6
Power Electronics .....	7
Power Network Planning and Operation .....	8
Systems and Control .....	9

### Non-technical compulsory modules

Enrolment: All modules

Project .....	10
---------------	----

### Technical elective modules

Enrolment: Choice of modules according to the regular curriculum.

Technical elective modules can be chosen from the list given in the catalogue of elective modules, whereby it is recommended to put a focus on one of the subject areas

#### Automation Systems

Distributed Control Systems .....	11
Automotion Lab .....	12
Non-linear Control .....	13
Process Control .....	14
Structure and Behaviour Modelling - UML .....	15

## Information and Communication Technology

Introduction to RF Communication Systems.....	16
Image Coding.....	17
Medical Imaging - CT.....	18
Speech Recognition .....	19
FPGA and Microcontroller Programming .....	19
Theoretical Neuroscience II.....	21
Mobile and Satellite Communication Systems .....	22
Advanced Antenna Theory .....	23
Digital Information Processing Laboratory .....	24

## Microsystems

CMOS Si Process .....	25
Sensors.....	26
Microsystems.....	27
Optoelectronic and Photovoltaic Devices.....	28
Ultrasonic Sensors for Imaging .....	29
Introduction into Medical Imaging.....	30
MEMS Technologies .....	31
Packaging for Microelectronics and Microsystems.....	32

## Power and Energy

Modern Concepts of EMC and EMC Measurements .....	33
Advanced Power Electronics .....	34
Power Electronic Components and Systems.....	35
Renewable Energy Sources .....	36
Power System Economics and Special Topics .....	37

## General

Integrated Project.....	38
-------------------------	----

## Non-technical elective modules

Enrolment: Choice of modules according to the regular curriculum.

Modules from Master courses of OvGU can be selected- but without technical engineering modules.

Explicitly allowed are also foreign languages, such as German for foreign students.

## Master-Thesis

Master thesis .....	40
---------------------	----

# Technical compulsory modules

Enrolment: All modules

Module	<b>Electromagnetic Field Theory</b>
Objectives and contents	<b>Objectives:</b> The student will <ul style="list-style-type: none"><li>▪ know mathematical basics (vector analysis, operators and integral theorems)</li><li>▪ know and understand fundamental laws of electromagnetics, constituting the system of Maxwell's field equations and the boundary conditions for the different fields</li><li>▪ learn how to solve basic problems for static and dynamic fields</li></ul> <b>Contents:</b> <ol style="list-style-type: none"><li>1. Mathematical fundamentals</li><li>2. Static electric fields</li><li>3. Stationary currents and the static magnetic field</li><li>4. Time-varying electromagnetic</li></ol>
Teaching	Lectures and exercises
Literature	J.A. Edminster, Schaum's Outline of Electromagnetics - (Schaum's Outline Series), McGraw-Hill Book Company
Prerequisites	Bachelor in Electrical Engineering or related studies
Usability of the module	Compulsory module for the Master Course "Electrical Engineering and Information Technology"
Exam	Written test at the end of the course
Credit points	5 Credit Points = 150 h (42 h time of attendance + 108 h autonomous work)
Work load	Time of attendance: 2 hours/week – lecture, 1 hours/week - exercises Autonomous work: Post processing of lectures, preparation of exercises, preparation of exam
Availability	Every winter semester
Duration	One semester
Responsibility	Prof. Dr.-Ing. Marco Leone (FEIT-IGET)

[▲ Table of contents ▲](#)

Module	<b>Electronic Circuits</b>
Objectives and contents	<p><b>Objectives:</b> The student will</p> <ul style="list-style-type: none"> <li>▪ understand the main function principles on the interface between analog and digital circuit design</li> <li>▪ have an overview about the realization of some complex function blocks</li> </ul> <p><b>Contents:</b></p> <ul style="list-style-type: none"> <li>▪ digital analog converters: methods, characteristics, errors, applications</li> <li>▪ analog digital converters: classification, methods, characteristics, errors, applications</li> <li>▪ phase locked loops: principle, linear model, circuit design of the function blocks, applications</li> <li>▪ programmable logic devices: overview, characteristics, circuit design of some function blocks, design process, introduction VHDL</li> <li>▪ design and test of digital circuits with programmable logic devices</li> </ul>
Teaching	Lectures, exercises and laboratory
Literature	U. Tietze, C. Schenk, D. Gamm: Electronic Circuits: Handbook for Design and Applications. Springer R. Best: Phase-Locked Loops: Design, Simulation and Applications. McGraw-Hill
Prerequisites	Bachelor in Electrical Engineering or related studies
Usability of the module	Optional module in the Master Course “Electrical Engineering and Information Technology”
Exam	Oral test at the end of the course
Credit points	5 Credit points = 150 h (42 h time of attendance and 108 h autonomous work)
Work load	<p>Time of attendance</p> <ul style="list-style-type: none"> <li>▪ 2 hours/week - lecture</li> <li>▪ 1 hours/week – exercises/laboratory</li> </ul> <p>Autonomous work</p> <ul style="list-style-type: none"> <li>▪ post processing of lectures and laboratory work, preparation of exercises, laboratory work, research report and exam</li> </ul>
Availability	Every winter semester
Duration	One semester
Responsibility	Prof. Dr. rer. nat. Georg Rose (FEIT-IIKT)

▲ Table of contents ▲

Module	<b>Digital Communication Systems</b>
Objectives and contents	<p><b>Objectives:</b> The student will</p> <ul style="list-style-type: none"> <li>▪ Gain knowledge about the functions and properties of digital communication systems</li> <li>▪ Understand the physical principles underlying digital communication</li> <li>▪ Gain knowledge about the modern wired and wireless digital communication standards</li> </ul> <p><b>Contents:</b></p> <ul style="list-style-type: none"> <li>▪ Introduction</li> <li>▪ Signal representation</li> <li>▪ Stochastic processes and noise</li> <li>▪ Sampling, quantization, and coding</li> <li>▪ Transmission bandwidth, data rate, and channel capacity</li> <li>▪ Calculation of error rates</li> <li>▪ PCM, ASK, PSK, and FSK modulation techniques</li> <li>▪ OFDM and CDMA</li> <li>▪ Modeling of wireless channels</li> </ul>
Teaching	Lectures and exercises
Literature	Jerry D. Gibson: Principles of Digital and Analog Communications. Macmillian Publishing Company, 1989, ISBN 0-02-341780-3
Prerequisites	Bachelor in Electrical Engineering or related studies
Usability of the module	Mandatory module for the Master “Electrical Engineering and Information Technology”
Exam	Written exam K120 at the end of the course
Credit points	5 Credit points = 150 h (42 h time of attendance and 108 h autonomous work)
Work load	<p>Time of attendance</p> <ul style="list-style-type: none"> <li>▪ 2 hours/week - lecture</li> <li>▪ 1 hours/week – exercises</li> </ul> <p>Autonomous work</p> <ul style="list-style-type: none"> <li>▪ post processing of lectures, preparation of exercises, research report and exam</li> </ul>
Availability	Every summer semester
Duration	One semester
Responsibility	Prof. Dr.-Ing. Abbas Omar (FEIT-IKT)

[▲ Table of contents ▲](#)

Module	<b>Digital Information Processing</b>
Objectives and contents	<p><b>Objectives:</b></p> <ul style="list-style-type: none"> <li>▪ The participant has an overview of basic problems and methods of digital signal processing.</li> <li>▪ The participant understands the functionality of a digital signal processing system and can mathematically explain the modus of operation.</li> <li>▪ The participant can assess applications in terms of stability and other markers. He / She can calculate the frequency response and reconstruction of analogue signals.</li> <li>▪ The participant can perform these calculations and assessments as well on stochastically excited digital systems.</li> <li>▪ The participant can apply this knowledge in a field of specialization, e.g. Medical Signal Analysis</li> </ul> <p><b>Contents:</b></p> <ol style="list-style-type: none"> <li>1. Digital Signals and Digital LTI Systems</li> <li>2. Z-Transform and Difference Equations</li> <li>3. Sampling and Reconstruction</li> <li>4. Synthesis and analysis of such systems</li> <li>5. Discrete and Fast Fourier Transformations</li> <li>6. Processing of Stochastic Signals by LTI-Systems: Correlation Techniques and Model-Based Systems (ARMA)</li> <li>7. Selected Specialization Topics, e.g. Medical Signal Analysis</li> </ol>
Teaching	Lecture and exercises
Literature	Oppenheim, A; Schafer R (1975): "Digital Signal Processing" 784 pages, Prentice Hall, ISBN: 0132146355
Prerequisites	Bachelor in Electrical Engineering or related studies Knowledge of signals and systems, Analog Fourier transformations
Usability of the module	Master Courses in the Faculty of Electrical Engineering and Information Technology, and other Master Courses
Exam	Mandatory participation in exercise classes, successful results in exercises / written exam at the end of the course
Credit points	5 Credit points = 150 h (42 h time of attendance and 108 h autonomous work)
Work load	<p>Time of attendance</p> <ul style="list-style-type: none"> <li>▪ 2 hours/week - lecture</li> <li>▪ 1 hours/week - exercises</li> </ul> <p>Autonomous work</p> <ul style="list-style-type: none"> <li>▪ postprocessing of lectures, preparation of exercises and exam</li> </ul>
Availability	Winter Semester, every year
Duration	One semester
Responsibility	Prof. Dr. rer. nat. Andreas Wendemuth (FEIT-IESK)

[▲ Table of contents ▲](#)

Module	<b>Power Electronics</b>
Objectives and contents	<p><b>Objectives:</b>  Knowledge about important power electronic circuits shall be imparted. Major methods to understand power electronic circuits are practised. Applications will be demonstrated in the exercise. Cross-links to related fields of electrical and information engineering will be shown.</p> <p><b>Contents:</b></p> <ul style="list-style-type: none"> <li>▪ choppers <ul style="list-style-type: none"> <li>▫ buck chopper</li> <li>▫ boost chopper</li> <li>▫ phase leg</li> </ul> </li> <li>▪ self commutated bridges with constant voltage DC link <ul style="list-style-type: none"> <li>▫ H-bridge</li> <li>▫ three phase bridge</li> </ul> </li> <li>▪ rectifiers <ul style="list-style-type: none"> <li>▫ single and three phase</li> <li>▫ uncontrolled, half controlled, controlled</li> </ul> </li> <li>▪ AC controllers</li> </ul>
Teaching	Lecture, exercise
Literature	Ned Mohan: Power electronics - converters, applications and design; Wiley, Hoboken NJ, 3rd edition 2003
Prerequisites	Bachelor in Electrical Engineering or related studies, comprising, fundamentals of electrical engineering, electronics – circuit theory, fundamentals of semiconductor components, mathematics
Usability of the module	Compulsory module for the Master Course “Electrical Engineering and Information Technology” belonging to the field of electrical energy systems
Exam	Written examination without auxiliaries at the end of the course
Credit points	5 Credit points = 150 h (42 h time of attendance and 108 h autonomous studies)
Work load	Time of attendance <ul style="list-style-type: none"> <li>▪ 2 hours/week – lecture</li> <li>▪ 1 hour/week – exercises</li> </ul> Autonomous work <ul style="list-style-type: none"> <li>▪ postprocessing of lectures</li> <li>▪ preparation of exercises and exam</li> </ul>
Availability	Winter semester
Duration	One semester
Responsibility	Prof. Dr.-Ing. Andreas Lindemann (FEIT-IESY)

▲ [Table of contents](#) ▲

Module	<b>Power Network Planning and Operation</b>
Objectives and contents	<p><b>Objectives:</b> The student will learn how</p> <ul style="list-style-type: none"> <li>▪ the power transmission and distribution system are operated</li> <li>▪ to calculate short circuits, load flow and planning the network</li> <li>▪ to calculate asymmetric failures using symmetrical components</li> </ul> <p><b>Contents:</b></p> <ul style="list-style-type: none"> <li>▪ Operation and function of power systems</li> <li>▪ Utilities and their models</li> <li>▪ Mathematical transformation into per unit system</li> <li>▪ Operation of short lines and working area of long lines / power networks</li> <li>▪ Load flow calculation using nodal point method</li> <li>▪ Short circuit calculation</li> <li>▪ Power system operation</li> <li>▪ Power system control</li> <li>▪ Power system protection</li> <li>▪ Power electronics in power systems</li> <li>▪ Transformation into symmetrical components</li> </ul>
Teaching	Lecture and exercises
Literature	Electric Power System Planning“, H. Seifi, M.S. Sepasian, Springer-Verlag, 2011 „Power system engineering : planning, design, and operation of power systems and equipment“, Juergen Schlabbach. - Weinheim : WILEY-VCH, 2008
Prerequisites	Bachelor in Electrical Engineering or related studies
Usability of the module	Compulsory module for the Master Course “Electrical Engineering and Information Technology”
Exam	Written test at the end of the course
Credit points	5 Credit points = 150 h (42 h time of attendance and 108 h autonomous work)
Work load	<p>Time of attendance</p> <ul style="list-style-type: none"> <li>▪ 2 hours/week - lecture</li> <li>▪ 1 hours/week - exercises</li> </ul> <p>Autonomous work</p> <ul style="list-style-type: none"> <li>▪ Post processing of lectures preparation of exercises and exam</li> </ul>
Availability	Every winter semester
Duration	One semester
Responsibility	Prof. Dr.-Ing. habil. Zbigniew Antoni Styczynski (FEIT-IESY)

▲ Table of contents ▲

Module	<b>Systems and Control</b>
Objectives and contents	<p><b>Objectives:</b> The student will learn how to</p> <ul style="list-style-type: none"> <li>▪ mathematically describe and analyse dynamic systems</li> <li>▪ design feedback control systems using frequency and time domain techniques</li> <li>▪ efficiently apply modern software tools to achieve the aforementioned goals</li> </ul> <p><b>Contents:</b></p> <ul style="list-style-type: none"> <li>▪ Introduction to control systems</li> <li>▪ Mathematical models of systems</li> <li>▪ Feedback control systems characteristics</li> <li>▪ The performance of feedback control systems</li> <li>▪ The stability of linear feedback systems</li> <li>▪ The root locus method</li> <li>▪ Frequency response method</li> <li>▪ The design of state variable feedback systems (Full-state feedback design and observer design methods)</li> </ul>
Teaching	Lecture and exercises
Literature	R. C. Dorf, R. H. Bishop: Modern Control Systems, Pearson Education, 2005
Prerequisites	Bachelor in Electrical Engineering or related studies
Usability of the module	Compulsory module for the Master's course "Electrical Engineering and Information Technology", optional module for students of the "International Max-Planck Research School" and the Master's course "Chemical Process Engineering"
Exam	Written test at the end of the course
Credit points	5 Credit points = 150 h (42 h time of attendance and 108 h autonomous work)
Work load	<p>Time of attendance</p> <ul style="list-style-type: none"> <li>▪ 2 hours/week - lecture</li> <li>▪ 1 hours/week - exercises</li> </ul> <p>Autonomous work</p> <ul style="list-style-type: none"> <li>▪ post-processing of lectures, preparation of exercises and exam</li> </ul>
Availability	Every winter semester
Duration	One semester
Responsibility	Prof. Dr.-Ing. habil. Achim Kienle (FEIT-IFAT)

▲ [Table of contents](#) ▲

# Non-technical compulsory modules

Enrolment: All modules

Name of module	<b>Project</b>
Objectives and contents	<p><b>Objectives:</b></p> <ul style="list-style-type: none"> <li>▪ The Student knows the typical processes in scientific work. After passing the module the student is able to develop scientific project ideas, to analyze the state of science and technology and to perform market analysis. The student can develop project specifications and write a scientific project report.</li> </ul> <p><b>Contents:</b></p> <p><b>Part 1 (obligatory seminar)</b></p> <ul style="list-style-type: none"> <li>▪ use of scientific literature search engines, libraries and the internet</li> <li>▪ promotion of scientific work</li> <li>▪ rules of scientific presentations and publications</li> </ul> <p><b>Part 2</b></p> <ul style="list-style-type: none"> <li>▪ application of the obtained skills on a specific topic under supervision of the project supervisor</li> </ul>
Teaching	Seminar
Prerequisites	Part 2 of the module can only be attended if the part 1 was successfully passed
Usability of the module	Master EEIT
Exam	Seminar paper
Credit points	5 Credit Points = 150 h (42 h time of attendance and 108 h autonomous work)
Work load	Time of attendance: 3 hours/week - project
Availability	Every summer semester
Duration	One semester
Responsibility	Part 1: Dr. Magdowski Part 2: Project supervisor

[▲ Table of contents ▲](#)

## Technical elective modules

Enrolment: Choice of modules according to the regular curriculum.

Technical elective modules can be chosen from the list given in the catalogue of elective modules, whereby it is recommended to put a focus on one of the subject areas

### Automation Systems

Module	<b>Distributed Control Systems</b>
Objectives and contents	<p><b>Objectives:</b></p> <ul style="list-style-type: none"> <li>▪ Architecture of distributed control systems</li> <li>▪ Function chain of field devices</li> <li>▪ Programmable Logic Controller</li> <li>▪ Supervisory systems</li> <li>▪ Industrial communication system</li> <li>▪ Engineering</li> </ul> <p><b>Contents:</b></p> <p>The lectures and exercises provide students with basic knowledge about instrumentation of automation systems. The instrumentation executes the algorithms of the application design. The devices are connected via digital industrial communication systems therefore they perform together a distributed control system. The students get theoretical and practical skills in installation and commissioning of distributed control systems.</p>
Teaching	Lectures (2) + Exercises (1) + Lab Courses (1)
Literature	Richard Zurawski (ed): The industrial information technology. Handbook. CRC Press 2005. ISBN 0-8493-1985-4
Prerequisites	Bachelor in Electrical Engineering or related studies
Usability of the module	Optional module for the Master Course “Electrical Engineering and Information Technology”
Exam	Written test at the end of the module
Credit points	5 Credit Points = 150 h (56 h time of attendance + 94 h autonomous work)
Work load	<p>Time of attendance</p> <ul style="list-style-type: none"> <li>▪ 2 hours/week – lecture</li> <li>▪ 1 hours/week – exercises</li> <li>▪ 1 hours/week – lab courses</li> </ul> <p>Autonomous work</p> <ul style="list-style-type: none"> <li>▪ Post processing of lectures, preparation of exercises, preparation of presentation, preparation of exam</li> </ul>
Availability	Every summer semester
Duration	One semesters
Responsibility	Prof. Dr.-Ing. Christian Diedrich (FEIT-IFAT)

▲ [Table of contents](#) ▲

Module	<b>Automotion Lab</b>
Objectives and contents	<p><b>Objectives:</b> To develop practical skills in the field of (process) automation.</p> <p><b>Contents:</b> The acquired knowledge from the courses “Systems and Control” and “Distributed Control Systems” should be applied to practical examples/systems of automation. For these purposes miscellaneous experiments will be conducted.</p>
Teaching	Laboratory
Literature	According to modules "Systems and Control” and “Distributed Control Systems
Prerequisites	Bachelor in Electrical Engineering or related studies, Systems and Control, Distributed Control Systems
Usability of the module	Optional module for the Master Course “Electrical Engineering and Information Technology”
Exam	Oral test after every experiment
Credit points	5 Credit points = 150 h (28 h time of attendance and 122 h autonomous work)
Work load	<p>Time of attendance</p> <ul style="list-style-type: none"> <li>▪ 2 hours/week - laboratory</li> </ul> <p>Autonomous work</p> <ul style="list-style-type: none"> <li>▪ post processing and preparation of laboratory</li> </ul>
Availability	Every winter semester
Duration	One semester
Responsibility	Prof. Dr.-Ing. habil. Achim Kienle (FEIT-IFAT)

▲ Table of contents ▲

Module	<b>Non-linear Control</b>
Objectives and contents	<p><b>Objectives:</b> The students will be able to describe and model nonlinear systems, to analyze the system dynamic behaviour such as stability considering different stability concepts, and to design controllers for nonlinear systems.</p> <p><b>Contents:</b></p> <ul style="list-style-type: none"> <li>▪ Review of mathematical basics</li> <li>▪ Review of linear MIMO systems</li> <li>▪ Lyapunov stability</li> <li>▪ Concepts of BIBO stability</li> <li>▪ Passivity</li> <li>▪ I/O linearization</li> <li>▪ Design of controllers for nonlinear systems</li> </ul>
Teaching	Lecture and exercises/tutorials
Literature	<p>D.E. Kirk. Optimal Control Theory – An Introduction. Prentice-Hall Inc., Englewood Cliffs, New Jersey, 2004</p> <p>D.P. Bertsekas. Dynamic Programming and Optimal Control, volume 1. Athena Scientific Press, Belmont, MA, 2006</p> <p>R. Bellman. Dynamic Programming. Princeton University Press, Princeton, New Jersey, 1957</p>
Prerequisites	Knowledge in control theory
Usability of the module	<p>Optional module for the Master Courses “Systemtechnik und Technische Kybernetik”</p> <p>Optional module for the Master Course “Electrical Engineering and Information Technology”</p>
Exam	Oral test at the end of the course and project report
Credit points	5 Credit points = 150 h (42 h time of attendance and 108 h autonomous work)
Work load	<p>Time of attendance</p> <ul style="list-style-type: none"> <li>▪ 2 hours/week – lecture</li> <li>▪ 1 hour/week – exercise/tutorial</li> </ul> <p>Autonomous work</p> <ul style="list-style-type: none"> <li>▪ Post-processing of lectures, preparation of project work/report and exam</li> </ul>
Availability	Every summer semester
Duration	One semester
Responsibility	Prof. Dr.-Ing. Rolf Findeisen (FEIT-IFAT)

▲ Table of contents ▲

Module	<b>Process Control</b>
Objectives and contents	<p><b>Objectives:</b> Students should</p> <ul style="list-style-type: none"> <li>▪ learn fundamentals of multivariable process control with special emphasis on decentralized control</li> <li>▪ gain the ability to apply the above mentioned methods for the control of single and multi unit processes</li> <li>▪ gain the ability to apply advanced software (MATLAB) for computer aided control system design</li> </ul> <p><b>Contents:</b></p> <ol style="list-style-type: none"> <li>1. Introduction</li> <li>2. Process control fundamentals <ul style="list-style-type: none"> <li>▫ Mathematical models of processes</li> <li>▫ Control structures</li> <li>▫ Decentralized control and Relative gain analysis</li> <li>▫ Tuning of decentralized controllers</li> <li>▫ Control implementation issues</li> </ul> </li> <li>3. Case studies</li> <li>4. Plantwide control</li> </ol>
Teaching	Lecture and exercises/tutorials
Literature	B. W. Bequette: Process Control, Modeling Design and Simulation, Pearson Education, 2003
Prerequisites	Basic knowledge in control theory
Usability of the module	<p>Compulsory module for the Master Course “Elektrotechnik und Informationstechnik” Option “Automatisierungstechnik”</p> <p>Optional module for the Master Courses “Systemtechnik und Technische Kybernetik” and “Chemical Process Engineering”, for students of the International Max-Planck Research School</p> <p>Optional module for the Master Course “Electrical Engineering and Information Technology”</p>
Exam	Oral test at the end of the course and project report
Credit points	5 Credit points = 150 h (42 h time of attendance and 108 h autonomous work)
Work load	<p>Time of attendance</p> <ul style="list-style-type: none"> <li>▪ 2 hours/week – lecture</li> <li>▪ 1 hour/week – exercise/tutorial</li> </ul> <p>Autonomous work</p> <ul style="list-style-type: none"> <li>▪ Post-processing of lectures, preparation of project work/report and exam</li> </ul>
Availability	Every summer semester
Duration	One semester
Responsibility	Prof. Dr.-Ing. habil. Achim Kienle (FEIT-IFAT)

[▲ Table of contents ▲](#)

Module	<b>Structure and Behaviour Modelling - UML</b>
Objectives and contents	<p><b>Objectives:</b></p> <ul style="list-style-type: none"> <li>▪ Basements of object oriented modelling of technical and medicine systems</li> <li>▪ Main focus on modelling of structure and behaviour aspects</li> <li>▪ Description method using UML</li> <li>▪ Practical use of the UML tool Rhapsody</li> </ul> <p><b>Contents:</b></p> <p>The module teaches object-oriented system analyses and modelling approach applying mechatronic, embedded and medicine systems. This includes the principles of structural and behavioural analyses and syntheses processes. Systematic specification and development processes are presented using the UML languages for the mechatronic components and medicine systems. The basis of UML languages as well as the relations between language elements (e.g. class diagram, sequence diagram and state machine) is explained. The lecture and exercises are based on the UML tool Rhapsody of IBM.</p>
Teaching	Lectures (2) + Exercises (1)
Literature	Booch/ Rumbaugh/ Jacobson: Das UML- Benutzerhandbuch, Addison Wesley, 2006 Harald Störrle: UML2 für Studenten, Pearson Studium, 2005
Prerequisites	Bachelor in Electrical Engineering or related studies
Usability of the module	Optional module for the Master Course “Electrical Engineering and Information Technology”
Exam	Oral test at the end of the module
Credit points	5 Credit Points = 150 h (42 h time of attendance + 108 h autonomous work)
Work load	<p>Time of attendance</p> <ul style="list-style-type: none"> <li>▪ 2 hours/week - lecture</li> <li>▪ 1 hours/week - exercises</li> </ul> <p>Autonomous work</p> <ul style="list-style-type: none"> <li>▪ Post processing of lectures, preparation of exercises, preparation of presentation, preparation of exam</li> </ul>
Availability	Every winter semester
Duration	One semesters
Responsibility	Prof. Dr.-Ing. Christian Diedrich (FEIT-IFAT)

▲ Table of contents ▲

## Information and Communication Technology

Module	<b>Introduction to RF Communication Systems</b>
Objectives and contents	<p><b>Objectives:</b> The student will</p> <ul style="list-style-type: none"> <li>▪ Understand the differences between low-frequency and radio-frequency networks</li> <li>▪ Gain knowledge about radio-frequency communication systems</li> <li>▪ Be capable of analyzing and designing selected components of radio-frequency communication systems</li> </ul> <p><b>Contents:</b></p> <ul style="list-style-type: none"> <li>▪ Introduction</li> <li>▪ Transmission lines</li> <li>▪ Scattering parameters</li> <li>▪ Matching networks and filters</li> <li>▪ Attenuators, phase shifters, directional couplers, and circulators</li> <li>▪ Microwave amplifiers and oscillators</li> </ul>
Teaching	Lectures and exercises
Literature	R.E. Collin, "Foundations for Microwave Engineering", McGraw-Hill, 1966
Prerequisites	Bachelor in Electrical Engineering or related studies
Usability of the module	Master Courses in the Faculty of Electrical Engineering and Information Technology, and other Master Courses
Exam	Written exam K90 at the end of the course
Credit points	5 Credit points = 150 h (42 h time of attendance and 108 h autonomous work)
Work load	<p>Time of attendance</p> <ul style="list-style-type: none"> <li>▪ 2 hours/week - lecture</li> <li>▪ 1 hours/week – exercises</li> </ul> <p>Autonomous work</p> <ul style="list-style-type: none"> <li>▪ post processing of lectures, preparation of exercises, research report and exam</li> </ul>
Availability	Every summer semester
Duration	One semester
Responsibility	Prof. Dr.-Ing. Abbas Omar (FEIT-IIKT)

▲ [Table of contents](#) ▲

Module	<b>Image Coding</b>
Objectives and contents	<p><b>Objectives:</b> Learn about methods and techniques of image coding as essential part of image communication. Problems of image acquisition are treated as far as they are relevant for image coding.</p> <p><b>Contents:</b></p> <ul style="list-style-type: none"> <li>▪ Fundamentals</li> <li>▪ Basics of human perception</li> <li>▪ TV systems</li> <li>▪ Basics of information</li> <li>▪ Quantisation</li> <li>▪ Lossless Coding</li> <li>▪ Lossy Coding</li> <li>▪ DPCM</li> <li>▪ Interframe Prediction</li> <li>▪ Transform Coding</li> <li>▪ Content based and semantic Coding</li> <li>▪ Standards and applications</li> </ul>
Teaching	Lectures and exercises
Literature	John W. Woods: Multidimensional signal, image, and video processing and coding, Academic Press, 2012,
Prerequisites	Bachelor in Electrical Engineering or related studies
Usability of the module	Optional module for the Master Course “Electrical Engineering and Information Technology”
Exam	Oral test at the end of the module
Credit points	5 Credit Points = 150 h (42 h time of attendance + 108 h autonomous work)
Work load	<p>Time of attendance</p> <ul style="list-style-type: none"> <li>▪ 1 x 2 hours/week - lecture</li> <li>▪ 1 x 1 hours/week - exercises</li> </ul> <p>Autonomous work</p> <ul style="list-style-type: none"> <li>▪ Post processing of lectures, preparation of exercises, preparation of presentation, preparation of exam</li> </ul>
Availability	Every winter semester
Duration	One semester
Responsibility	Dr.-Ing. Gerald Krell (FEIT-IESK)

[▲ Table of contents ▲](#)

Module name	<b>Medical Imaging - CT</b>
Objective and content	<p><b>Objectives:</b> The student will:</p> <ul style="list-style-type: none"> <li>▪ understand the system theory of imaging systems</li> <li>▪ learn the functional principle of the computed tomography</li> <li>▪ understand the mathematical principle of tomographic reconstruction</li> <li>▪ have an overview about the current research work in the area of tomographic imaging</li> </ul> <p><b>Content:</b> Starting with the system theory of imaging systems, the first part of the module is focused on the physical properties of x-rays and it's interaction with matter. The second part deals with X-ray based standard radiography. The third and final part brings the mathematical methods of tomographic image reconstruction into focus. The particular content is:</p> <ul style="list-style-type: none"> <li>▪ System theory of imaging systems</li> <li>▪ Basic principle of underlying physics</li> <li>▪ X-ray tubes and detectors</li> <li>▪ Radiography</li> <li>▪ Reconstruction: Fourier-based principle, Filtered back projection, Algebraic approach, statistical methods</li> <li>▪ Beam-geometry: Parallel-, Fan- and Conebeam</li> <li>▪ Implementation</li> <li>▪ Artefacts and Adjustment</li> </ul>
Teaching	Lecture and tutorial
Literature	Provided by e-learning system
Prerequisites	Digital Signal Processing, Fundamental Physics
Applicability of the module	Master Courses in the Faculty of Electrical Engineering and Information Technology, and other Master Courses
Certificates and examination	Oral test
Credit points	5 Credit Points = 150 h (42 h time of attendance + 108 h autonomous work)
Work load	<p>Time of attendance:</p> <ul style="list-style-type: none"> <li>▪ 2 hours/week – lecture</li> <li>▪ 1 hour/week – tutorial</li> </ul> <p>Autonomous work:</p> <ul style="list-style-type: none"> <li>▪ Rework of lectures and tutorial, preparation of exercises</li> </ul>
Frequency	Every summer semester
Duration	One semester
Responsible person	Prof. Dr. rer. nat. Georg Rose (FEIT-IKT)

[▲ Table of contents ▲](#)

Module	<b>Speech Recognition</b>
Objectives and contents	<p><b>Objectives:</b></p> <ul style="list-style-type: none"> <li>▪ The participant understands basic problems and methods of automatic speech recognition with Hidden Markov Models.</li> <li>▪ The participant understands the functionality of the relevant computer modules in speech recognition and can mathematically explain the modus of operation.</li> <li>▪ The participant knows specific requirements for speech recognition. These can include reliability, availability, speaker verification.</li> <li>▪ The participant knows specific requirements and differences in command, dictation and dialogue mode, particularly in the field of applications (e.g. medical) and support systems.</li> </ul> <p><b>Contents:</b></p> <ol style="list-style-type: none"> <li>1. Production and Reception of Natural Speech</li> <li>2. Feature Extraction</li> <li>3. Classification Techniques</li> <li>4. Hidden Markov Models (DTW, Viterbi, Baum-Welch)</li> <li>5. Language Models</li> <li>6. Aspects of robust Speech Recognition: adaptivity, reliability, availability, speaker verification.</li> <li>7. Practical Speech Recognition Systems Design</li> </ol>
Teaching	Lecture, exercises, lab course
Literature	Rabiner, L & Juang, B (1993): „Fundamentals of Speech Recognition“, 507 pages, Prentice Hall, ISBN: 0-13-015157-2
Prerequisites	Bachelor in Electrical Engineering or related studies Knowledge of digital signal processing
Usability of the module	Optional module for the Master Course “Electrical Engineering and Information Technology”
Exam	Mandatory participation in exercise classes, successful results in exercises / written exam at the end of the course
Credit points	5 Credit points = 150 h (56 h time of attendance and 94 h autonomous work)
Work load	<p>Time of attendance</p> <ul style="list-style-type: none"> <li>▪ 2 hours/week – lecture</li> <li>▪ 1 hours/week – exercises</li> <li>▪ 1 hours/week – lab courses</li> </ul> <p>Autonomous work</p> <ul style="list-style-type: none"> <li>▪ postprocessing of lectures preparation of exercises and exam</li> </ul>
Availability	Once a year, Summer Semester
Duration	One term
Responsibility	Prof. Dr. rer. nat. Andreas Wendemuth (FEIT-IESK)

[▲ Table of contents ▲](#)

Module	<b>FPGA and Microcontroller Programming</b>
--------	---

Objectives and contents	<p><b>Objectives:</b> The student will</p> <ul style="list-style-type: none"> <li>▪ have an overview about the design process of FPGAs and Microcontrollers</li> </ul> <p><b>Contents:</b></p> <ul style="list-style-type: none"> <li>▪ Programmable logic devices: overview, circuit design of special function blocks, introduction in the hardware description languages and their realization</li> <li>▪ Microcontroller: overview, description of special function blocks from the view of circuit design, realization of projects in assembly language and C</li> <li>▪ simulation and methods of debugging</li> </ul>
Teaching	Laboratory
Literature	Documentation available: <a href="http://www.xilinx.com">www.xilinx.com</a>
Prerequisites	Bachelor in Electrical Engineering or related studies, Electronic Circuits
Usability of the module	Optional module in the Master Course “Electrical Engineering and Information Technology”
Exam	Oral test at the end of the course
Credit points	5 Credit points = 150 h (70 h time of attendance and 80 h autonomous work)
Work load	<p>Time of attendance</p> <ul style="list-style-type: none"> <li>▪ 5 hours/2 weeks - laboratory</li> </ul> <p>Autonomous work</p> <ul style="list-style-type: none"> <li>▪ post processing, preparation of laboratory work, research report and exam</li> </ul>
Availability	Start every summer semester
Duration	Two semesters
Responsibility	Dr.-Ing. Thomas Schindler (FEIT-IKT)

▲ [Table of contents](#) ▲

Module	<b>Theoretical Neuroscience II</b>
Objectives and contents	<p><b>Objektives:</b></p> <p>Based on Chapters 7-10 of Dayan &amp; Abbott. Rate models of network dynamics, synaptic plasticity, reinforcement learning, and generative models. Linear models of neural networks, dynamic analysis of state-space, eigenvalue analysis of steady-states, models of activity-dependent plasticity, associative learning with neural networks, modern theories of reinforcement learning (Rescorla-Wagner, temporal-difference, actor-critic models), and abstract approaches to representational learning and generative models (expectation maximization, principal components, independent components).</p> <p>To develop a deeper understanding and to acquire applied and practical skills, students perform weekly homework assignments with Matlab programming. A passing grade on all assignments is required for admission to the final exam.</p> <p>The tutorial is open to all students and provides an opportunity for more extensive questions and discussions of the lecture material. It is particularly recommended for students with a weaker background in mathematics and physics.</p>
Teaching	Lectures and exercises
Literature	Dayan and Abbott (2001) Theoretical Neuroscience, MIT Press
Prerequisites	Required: basic knowledge in Calculus und Linear Algebra. Useful: basic knowledge in programming
Usability of the module	Master Courses in the Faculty of Electrical Engineering and Information Technology, and other Master Courses
Exam	Oral test
Credit points	5 Credit Points = 150 h (70 h time of attendance + 80 h autonomous work)
Work load	Time of attendance: 3 hours/week - lecture, 2 hours/week - exercises autonomous work: reworking of the lectures, the solution of exercises, exam preparation, project work
Availability	Every summer semester
Duration	One semester
Responsibility	Prof. Dr. Jochen Braun (FNW-IBIO)

▲ [Table of contents](#) ▲

Module	<b>Mobile and Satellite Communication Systems</b>
Objectives and contents	<p><b>Objectives:</b> The student will</p> <ul style="list-style-type: none"> <li>▪ Gain knowledge about wireless communication systems</li> <li>▪ Gain overview on the attributes of mobile communication systems</li> <li>▪ Understand the special problems of satellite communication</li> </ul> <p><b>Contents:</b></p> <ul style="list-style-type: none"> <li>▪ Introduction</li> <li>▪ General properties of wireless communication</li> <li>▪ Mobile communication systems</li> <li>▪ Satellite communication systems</li> <li>▪ Special problems encountered in satellite communication</li> </ul>
Teaching	Lectures and exercises
Literature	J. D. Gibson, "Principles of Digital and Analog Communications", Macmillan, 1989
Prerequisites	Bachelor in Electrical Engineering or related studies
Usability of the module	Elective module for the Master major "Electrical Engineering and Information Technology"
Exam	Oral test at the end of the course
Credit points	5 Credit points = 150 h (42 h time of attendance and 108 h autonomous work)
Work load	<p>Time of attendance</p> <ul style="list-style-type: none"> <li>▪ 2 hours/week - lecture</li> <li>▪ 1 hours/week – exercises</li> </ul> <p>Autonomous work</p> <ul style="list-style-type: none"> <li>▪ post processing of lectures, preparation of exercises, research report and exam</li> </ul>
Availability	Every winter semester
Duration	One semester
Responsibility	Prof. Dr.-Ing. Abbas Omar (FEIT-IIKT)

Module	<b>Advanced Antenna Theory</b>
Objectives and contents	<p><b>Objectives:</b> The student will</p> <ul style="list-style-type: none"> <li>▪ Gain knowledge about antenna characteristics</li> <li>▪ Gain knowledge about antenna-system design methods</li> <li>▪ Understand the fundamentals of phased arrays and beam forming</li> <li>▪ Gain knowledge about space-domain multiplexing</li> </ul> <p><b>Contents:</b></p> <ul style="list-style-type: none"> <li>▪ Introduction</li> <li>▪ Linear antennas</li> <li>▪ Antenna arrays</li> <li>▪ Beam forming</li> <li>▪ Butler matrix and Rotmann lens</li> </ul>
Teaching	Lectures and exercises
Literature	R.F. Harrington, "Time-Harmonic Electromagnetic Fields", McGraw-Hill, 1961
Prerequisites	Bachelor in Electrical Engineering or related studies
Usability of the module	Elective module for the Master major "Electrical Engineering and Information Technology"
Exam	Oral test at the end of the course
Credit points	5 Credit points = 150 h (42 h time of attendance and 108 h autonomous work)
Work load	<p>Time of attendance</p> <ul style="list-style-type: none"> <li>▪ 2 hours/week - lecture</li> <li>▪ 1 hours/week – exercises</li> </ul> <p>Autonomous work</p> <ul style="list-style-type: none"> <li>▪ post processing of lectures, preparation of exercises, research report and exam</li> </ul>
Availability	Every winter semester
Duration	One semester
Responsibility	Prof. Dr.-Ing. Abbas Omar (FEIT-IIKT)

▲ Table of contents ▲

Module	<b>Digital Information Processing Laboratory</b>
Objectives and contents	<p><b>Objectives:</b></p> <ul style="list-style-type: none"> <li>▪ The participant has an overview of basic methods of applied digital signal processing.</li> <li>▪ The participant can transform physiological knowledge into technical digital signal processing methods.</li> <li>▪ Selected Feature Space transformations and their applications are known.</li> <li>▪ Gaussian Production System Architectures are being estimated under Maximum-Likelihood Assumptions</li> </ul> <p><b>Contents:</b></p> <ol style="list-style-type: none"> <li>1. Digital Signals and Digital LTI Systems</li> <li>2. Synthesis and analysis of such systems</li> <li>3. Discrete and Fast Fourier Transformations</li> <li>4. Selected Feature Space transformations</li> <li>5. Gaussian Production System Architectures</li> <li>6. Characteristics of Human Speech</li> </ol>
Teaching	Seminar, Laboratory Course
Literature	Oppenheim, A; Schafer R (1975): “Digital Signal Processing” 784 pages, Prentice Hall, ISBN: 0132146355
Prerequisites	Credits obtained in the Course „Digital Signal Processing“ (Wendemuth)
Usability of the module	Master Courses in the Faculty of Electrical Engineering and Information Technology, and other Master Courses
Exam	Successful laboratory attendance (Praktikumsschein), and oral exam at the end of the course
Credit points	5 Credit points = 150 h (42 h time of attendance and 108 h autonomous work)
Work load	<p>Time of attendance</p> <ul style="list-style-type: none"> <li>▪ 3 hours/week – seminar + lab course</li> </ul> <p>Autonomous work</p> <ul style="list-style-type: none"> <li>▪ Pre- and postprocessing of course; preparation of exam</li> </ul>
Availability	Summer Semester, every year
Duration	One semester
Responsibility	Prof. Dr. rer. nat. Andreas Wendemuth (FEIT-IESK)

Module	<b>Sensors</b>
Objectives and contents	<p><b>Objectives:</b> The students gain knowledge in fundamentals and applications of sensors and sensor systems. After finishing the module they will understand modern sensor principles and sensor technologies and will be able applying sensors and sensor systems. They will further achieve basic knowledge in the design of sensors and sensor systems. By means of exercises they learn to deepen their knowledge for further research and to apply it to solve complex problems.</p> <p><b>Contents:</b></p> <ol style="list-style-type: none"> <li>1. Fundamentals and principles of sensors</li> <li>2. Physical sensors, incl. mechanical sensors, magnetic sensors, thermal sensors</li> <li>3. Chemical/biochemical sensors</li> <li>4. Resonant sensors</li> <li>5. Selected application examples</li> </ol>
Teaching	Lectures and exercises
Literature	Fraden, J., Handbook of Modern Sensors, AIP Press 2004.
Prerequisites	Bachelor in Electrical Engineering or related studies
Usability of the module	Optional module for the Master “Electrical Engineering and Information Technology”
Exam	Oral test
Credit points	5 Credit Points = 150 h (42 h time of attendance + 108 h autonomous work)
Work load	Time of attendance: 2 hours/week – lecture, 1 hour /week exercise Autonomous work: Post processing of lectures, preparation of exercises, preparation of presentation, preparation of exam
Availability	Every summer semester
Duration	One semester
Responsibility	apl. Prof. Dr. rer. nat. habil. Ralf Lucklum (FEIT-IMOS)

▲ Table of contents ▲

Module	<b>Microsystems</b>
Objectives and contents	<p><b>Objectives:</b> The students gain knowledge in fundamentals of microsystems and microfabricated devices. After finishing the module they will understand the function of microsystems and are able to apply this knowledge in different applications. They will further achieve basic knowledge in the design of microsensors, microactuators and complete microsystems and how to handle different packaging and manufacturing technologies. By means of exercises they learn to deepen their knowledge for further research and to apply it to solve complex problems.</p> <p><b>Contents:</b></p> <ul style="list-style-type: none"> <li>▪ Microsystems materials</li> <li>▪ Microsystems technologies</li> <li>▪ Design of microsystems</li> <li>▪ Microsystems packaging</li> <li>▪ Applications and of microsystems</li> <li>▪ Future trends</li> </ul>
Teaching	Lectures and exercises
Literature	Fundamentals of microfabrication : the science of miniaturization; Marc J. Madou. - 2. ed. - Boca Raton: CRC Press, 2002, ISBN: 0-8493-0826-7
Prerequisites	Bachelor in Electrical Engineering or related studies
Usability of the module	Optional module for the Master Course “Electrical Engineering and Information Technology”
Exam	Oral test
Credit points	5 Credit Points = 150 h (42 h time of attendance + 108 h autonomous work)
Work load	Time of attendance: 2 hours/week – lecture, 1 hour /week exercise Autonomous work: Post processing of lectures, preparation of exercises, preparation of presentation, preparation of exam
Availability	Every winter semester
Duration	One semester
Responsibility	Prof. Dr. rer. nat. Bertram Schmidt (FEIT-IMOS)

Module	<b>Power Electronic Components and Systems</b>
Objectives and contents	<p><b>Objectives:</b></p> <ul style="list-style-type: none"> <li>▪ Knowledge about power semiconductor components as part of power supply or drive systems shall be imparted, considering the mutual interaction between component and system level. Applications will be demonstrated in the exercise. To strengthen the competence for interdisciplinary work, consideration of questions of reliability shall show cross-links to related fields of engineering.</li> </ul> <p><b>Contents:</b></p> <ul style="list-style-type: none"> <li>▪ power electronic components <ul style="list-style-type: none"> <li>▫ functionality, ratings and characteristics of IGBT, MOSFET and diode</li> <li>▫ packaging and assembly</li> </ul> </li> <li>▪ power electronic systems <ul style="list-style-type: none"> <li>▫ component stress in selected power supply and drive systems</li> <li>▫ dimensioning</li> <li>▫ reliability</li> </ul> </li> </ul>
Teaching	Lecture, exercise
Literature	Ned Mohan: Power electronics - converters, applications and design; Wiley, Hoboken NJ, 3rd edition 2003
Prerequisites	Bachelor in Electrical Engineering or related studies and Master Course “Power Electronics”
Usability of the module	Selectable module for the Master Course “Electrical Engineering and Information Technology”, belonging to the field of electrical energy systems
Exam	Oral examination at the end of the course
Credit points	5 Credit points = 150 h (42 h time of attendance and 108 h autonomous studies)
Work load	<p>Time of attendance</p> <ul style="list-style-type: none"> <li>▪ 2 hours/week – lecture</li> <li>▪ 1 hour/week – exercises</li> </ul> <p>Autonomous work</p> <ul style="list-style-type: none"> <li>▪ postprocessing of lectures</li> <li>▪ preparation of exercises and exam</li> </ul>
Availability	Winter semester
Duration	One semester
Responsibility	Prof. Dr.-Ing. Andreas Lindemann (FEIT-IESY)

▲ Table of contents ▲

Module	<b>Renewable Energy Sources</b>
Objectives and contents	<p><b>Objectives:</b> The student will learn how</p> <ul style="list-style-type: none"> <li>▪ renewable energy sources could be used for power generation</li> <li>▪ photovoltaic, wind power, hydro power, fuel cell power, terrestrial heat and biomass power plants operate</li> <li>▪ to plan and operate power networks using renewable and dispersed power generation</li> </ul> <p><b>Contents:</b></p> <ol style="list-style-type: none"> <li>1. Introduction in renewable energy sources, energy balancing</li> <li>2. Photovoltaic</li> <li>3. Wind Power</li> <li>4. Hydro Electric Power</li> <li>5. Fuel Cells</li> <li>6. Power storage technologies</li> <li>7. Network planning and operation with renewable energy and dispersed generation</li> </ol>
Teaching	Lecture, exercises
Literature	<p>"Renewable Energy Systems Fundamentals, Technologies, Techniques and Economics", Z. A. Styczynski, N. I. Voropai (Editors), ISBN: 978-3-940961-42-6, 2010</p> <p>"Power Conversion of Renewable Energy Systems", E. F. Fuchs, Mohammad A. S. Masoum, Springer-Verlag, 2011</p>
Prerequisites	Bachelor in Electrical Engineering or related studies
Usability of the module	Optional module for the Master Course "Electrical Engineering and Information Technology"
Exam	Written test at the end of the course
Credit points	5 Credit points = 150 h (42 h time of attendance and 108 h autonomous work)
Work load	<p>Time of attendance</p> <ul style="list-style-type: none"> <li>▪ 2 hours/week - lecture</li> <li>▪ 1 hours/week - exercises</li> </ul> <p>Autonomous work</p> <ul style="list-style-type: none"> <li>▪ Post processing of lectures preparation of exercises and exam</li> </ul>
Availability	Every summer semester
Duration	One semester
Responsibility	Prof. Dr.-Ing. habil. Zbigniew Antoni Styczynski (FEIT-IESY)

▲ Table of contents ▲

Module	<b>Power System Economics and Special Topics</b>
Objectives and contents	<p><b>Objectives:</b> The student will learn</p> <ul style="list-style-type: none"> <li>▪ the main principles of high voltage and high current engineering</li> <li>▪ the principles of materials used as isolator</li> <li>▪ how to calculate economics of power systems</li> <li>▪ how the energy market is structured and organized</li> <li>▪ how to calculate the reliability and ability of power grid components</li> <li>▪ how energy trading is organized and power prices will be calculated</li> </ul> <p><b>Contents:</b></p> <ol style="list-style-type: none"> <li>1. Electric power market and its liberalization</li> <li>2. Financing account</li> <li>3. The costs of transmission</li> <li>4. Liberalization of European energy market</li> <li>5. Energy trading</li> <li>6. Network reliability</li> <li>7. Network planning</li> <li>8. Computing in network planning</li> <li>9. High voltage measurement</li> <li>10. High voltage and high current generation</li> <li>11. Isolation materials</li> <li>12. Isolation technology engineering</li> <li>13. Use of high voltage technology in testing</li> </ol>
Teaching	Lecture and exercises
Literature	<p>“Fundamentals of Power System Economics”, Daniel S. Kirschen, Goran Strbac, John Wiley &amp; Sons Ltd, 2004</p> <p>“Power System Economics: designing markets for electricity”, Steven Stoft. Wiley Interscience, 2002</p>
Prerequisites	Bachelor in Electrical Engineering or related studies
Usability of the module	Optional module for the Master Course “Electrical Engineering and Information Technology”
Exam	Written test at the end of the course
Credit points	5 Credit points = 150 h (42 h time of attendance and 108 h autonomous work)
Work load	<p>Time of attendance</p> <ul style="list-style-type: none"> <li>▪ 1 hours/week - lecture</li> <li>▪ 2 hours/week - exercises</li> </ul> <p>Autonomous work</p> <ul style="list-style-type: none"> <li>▪ Post processing of lectures preparation of exercises and exam</li> </ul>
Availability	Every winter semester
Duration	One semester
Responsibility	Prof. Dr.-Ing. habil. Zbigniew Antoni Styczynski (FEIT-IESY)

## General

Module	<b>Integrated Project</b>
Objectives and contents	<p><b>Objectives:</b> This module serves to improve and apply the knowledge gained in a research-related topic. The student will develop his skills to work on a scientific topic under supervision. He will learn to perform research including accessible literature. In addition, the student will be able to develop his own research project.</p> <p><b>Contents:</b> The content of teaching is largely determined by the research project.</p>
Teaching	Scientific project
Prerequisites	Bachelor in Electrical Engineering or related studies
Usability of the module	Optional module for the Master Course “Electrical Engineering and Information Technology”
Exam	Research project
Credit points	10 Credit Points = 300 h (84 h time of attendance and 216 h autonomous work)
Work load	Time of attendance: 6 hours/week - scientific project autonomous work: Post processing of seminars and tutorials, preparation and performance of scientific work, preparation of presentations, preparation of a project
Availability	Every winter semester
Duration	One semester
Responsibility	Supervisor of the project

▲ [Table of contents](#) ▲

## **Non-technical elective modules**

Enrolment: Choice of modules according to the regular curriculum.

Modules from Master courses of OvGU can be selected- but without technical engineering modules.

Explicitly allowed are also foreign languages, such as German for foreign students.

# Master thesis

Module	<b>Master thesis</b>
Objectives and contents	<p><b>Objectives:</b></p> <ul style="list-style-type: none"> <li>▪ The participants created a research-oriented scientific work</li> <li>▪ The participant is safe in writing scientific text in the extent of a master thesis</li> <li>▪ The participant is able to respond scientifically, to present his work and to answer questions to his work</li> </ul> <p><b>Contents:</b> According to the consultation with the supervisor</p>
Teaching	Thesis, presentation
Prerequisites	--
Usability of the module	Master EEIT There is no interaction with other modules.
Exam	Presentation of a scientific text created by the participants themselves with novel character in the extent of a master thesis. Presentation and defense of the work.
Credit points	30 Credit Points = 900 h autonomous work
Work load	Time of attendance: - Autonomous work: Research-oriented scientific work
Availability	Every summer or winter semester
Duration	One semester
Responsibility	Supervisor of Master thesis
